[Narrative Report](#)

As a pediatrician, educator, researcher, and filmmaker, I have developed novel research methods, implemented educational initiatives, and collaborated with health organizations and policymakers to protect child health. I founded and direct the Center on Media and Child Health (CMCH), an interdisciplinary center of excellence that compiles, conducts, and translates scientific research on the positive and negative effects of media on children's physical, mental, and social health. Under my leadership, CMCH is building a comprehensive library of research on this topic and produces outreach materials for multiple audiences. These include Ask the Mediatrixian®, an online question and answer blog for parents; a research blog; and a monthly e-newsletter.

I developed an innovative research methodology, Video Intervention/Prevention Assessment (VIA), which uses patient-created visual illness narratives to investigate the illness experience. This methodology has been detailed in peer-reviewed medical and scientific journals, the *Encyclopedia of Qualitative Research Methods*, and several books on research methods. I was also awarded the SAM New Investigator Award for using VIA to investigate pediatric asthma, a study that generated the first paper to be published with video in *Pediatrics*.

I have served on the American Academy of Pediatrics' (AAP) Committee on Public Education and the Editorial Board of Pediatrics, authoring four AAP policy statements on media. I have testified to the U.S. Congress, the Illinois and North Carolina State Legislatures, and the Chicago City Council, as well as co-authored Federal legislation authorizing funding for health research on media effects. Visiting

Professorships have included the Morris Blum Professorship (University of Minnesota), Rutherford B. Polhill Professorship (University of Alabama), and the AAP CATCH Professorship at Schneider Children's Hospital. I have sat on expert panels for the Centers for Disease Control and Prevention, National Institute of Child Health and Human Development, and National Institute of Mental Health. I serve on the Advisory Boards of PBS Kids and *Parents* magazine, on the National Television Oversight Monitoring Board, and as a Senior Fellow of the Fred M. Rogers Center for Early Learning and Children's Media. I have been honored with the AAP's Holroyd-Sherry Award for "outstanding contributions that have demonstrated that media's influence on child and adolescent health is an important public health issue."

As a Scholar of the Academy at HMS, I have taught Patient-Doctor and outpatient management skills, and, since 2003, been Course Director of Adolescent Health at HSPH. I have written chapters for *Children and Television: 50 Years of Research*; senior authored a comprehensive report reviewing media influences on children 0-6 for the Kaiser Family Foundation, a chapter for a Blackwell psychology text, and an article for *Pediatrics in Review*; and co-edited an issue of *Adolescent Medicine State of the Art Reviews*. Mentees include David Bickham, PhD (faculty at CMCH pursuing research on media influences on bullying and victimization), John P. Murray, PhD (professor at Kansas State University, using fMRI to find biological bases for behavioral responses to media), and Gretchen Berland, MD (used patient-controlled video to make a documentary on disability that garnered her a MacArthur "genius grant").
